---

Sarah is scheduled to go out there Thursday, she said she'd call me with an onsite update.

Also asked Karen for any updates from the LDEQ side, received the following late yesterday afternoon:

The key activity would be the vertical seismic profile activity: Probes installed in well #s 11 and 14 will begin "Thumping" on the east side of sinkhole from 6 pm to 6 am, probably starting tomorrow and lasting 7 to 10 days.

TB has begun the installation of the in-home monitors. They are also still waiting on access agreements to install additional vent wells.

Can you do a FAST research on a proposed berm at the site? Supposedly to prevent salt water migration.

Greg Fife
